Art Unit 1653

Restriction to one of the following inventions is required under
35 U.S.C. 121:

- I. Claims 1-16, 19 and 22 are drawn to a pharmaceutical composition ,
classified in class 514, subclass 2.
- 5 II. Claims 17, 20 and 23-35 are drawn to a method of inhibiting
endothelial cell proliferation, classified in class 435, subclass
325.
- 10 III. Claims 18 and 21 are drawn to a method of inducing endothelial
cell apoptosis, classified in class 435, subclasses 6 and 7.2.

The Inventions are distinct, each from the other because of the
following reasons:

Invention I is related to Inventions II and III since Inventions II and
15 III use the composition of Invention I. However, the method of Invention I
and the methods of Inventions II and III that utilizes the claimed composition
have different method steps and endpoint. As the method of Invention I is
directed to a method of inhibiting angiogenesis, the method of Invention II is
directed to a method of inhibiting endothelial cell proliferation and the
20 method of Invention III is directed to a method of inducing endothelial cell
apoptosis.

The methods of Inventions II-III are separate and distinct because the
methods each have different methods steps and endpoints.

Because these inventions are distinct for the reasons given above and
25 have acquired a separate status in the art as shown by their different
classification, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-
